

Contact Profile (1/2)

- **Gary Chastek, SEI/CMU**
- Focus/Interests: In a software product line (SPL),
 - Production planning
 - “What to Build” practices,
 - SPL adoption
 - Application of SPL techniques to non-SPL organizations (problems)?

Contact Profile (2)

- **Objectives / Looking for**
 - Feedback on our approach; potential collaborators and industrial partners
 - People who could benefit from SPLs but cannot adopt them in the near future

Gary Chastek, SEI/CMU

The Problem

- Organization wants to adopt a SPL but cannot with current constraints
- How introduce SPL practices that
 - Operate within those constraints
 - Leverages existing development practices
 - Supports future SPL adoption

Gary Chastek, SEI/CMU

Current Solution

- Identify pain points and constraints
- Analyze existing artifacts and processes
- Incrementally evolve them towards applicable SPL artifacts and processes
- Demonstrate rapid and measurable improvements that address pain point

Gary Chastek, SEI/CMU

Why is it interesting?

- Because of the recent economic downturn, fewer organizations can afford a “full blown” SPL adoption.
- This approach evolves confidence in SPL approach as improvements are demonstrated.
- From our perspective it may widen the audience for SPL technology.

Gary Chastek, SEI/CMU
